

## Grade Three

The science units in grade three are organized into four units that take place during the Fall, Winter, and Spring. Major concepts/understandings found in the science curriculum include:

- All living things need shelter, food, clean water and the ability to survive in their environment.
- Different environments have different characteristics.
- People and other animals interact with, adapt to and alter their environment.
- Seasonal changes and weather conditions affect the natural world. These changes help shape an organism's yearly routines and life cycle.

Areas of study include Trees, Amphibians, Properties of Matter, and Mystery Powders. Tents and Towers
