14. Estimated Enrollment of Existing and Proposed Residential Development ..... 172-181
15. Actual Enrollment for Existing Complexes ..... 182-187

## INTRODUCTION AND OVERVIEW

## INTRODUCTION AND OVERVIEW

The Newton Public Schools K-12 enrollment was 11,717 students on October 1, 2022, a decrease of 93 students, or $-0.8 \%$, from last year. This enrollment decline was projected: enrollment was projected to decline $-0.8 \%$ from last year (with a projected enrollment of 11,713 ). This is the fifth year of a decline in enrollment in Newton. The state has also experienced enrollment decline, with $-4 \%$ statewide decline from five years ago. This trend of enrollment decline is expected to continue; the US Department of Education is projecting an enrollment decline of $-4.3 \%$ nationwide from 2020-2030, and an enrollment decline of $-4.5 \%$ in Massachusetts over the same time period.

Newton's projections for next year indicate a decline in enrollment of 88 students to 11,629 (or a decline of $-0.8 \%$ ). This decline is not consistent across levels. Elementary schools are projected to decline by $-0.6 \%$ ( -31 students), middle schools are projected to decline by $-5 \%$ ( -140 students), and high schools are projected to increase by $2.1 \%$ ( +83 students). The projection methodology this year follows the typical cohort survival ratio methodology utilized by Newton Public Schools, although the 2020 enrollment cohort survival ratios are excluded given the large impact that the pandemic had on our enrollment in 2020 . The projection methodology is described in more detail in the Enrollment Trends section.

The current five-year enrollment projections through 2027-28 show overall district enrollment declines in each year, as larger classes graduate grade 12 and smaller kindergarten classes are projected to enter. As in prior years, the current five-year enrollment projections include students projected to enroll from permitted residential developments (please see Appendix E for detailed information).

This is the eighth consecutive year of kindergarten enrollment under 900, which impacts the elementary projections over the next five years as these smaller cohorts of students progress through the elementary grades. Even though projected kindergarten classes average 672 students over the next five years, strong cohort growth in first grade and projected additional students from new residential developments results in cohorts between just under 700 to almost 900 students in grades 1 through 5 over the next five years. Because of this strong cohort growth and projected new students from developments, this year's class of 711 kindergarten students is projected to grow to 852 students by fall 2027 when this class is in fifth grade.

The projected kindergarten class in two years (2024-2025) is the smallest of the five-year projection at 617 students, and although this cohort is projected to grow as it moves through the elementary grades, it remains below 730 students in the five year projection. This smaller projected cohort is based on the lower number of births in 2019 ( 580 births), which is a large decline from the prior year (663 births); please note that the projected total cohort includes projected enrollments from new residential developments. The number of births came back up in 2020 ( 642 births), and the estimated births for 2021 and 2022 are similar to 2020. Please see Section II (Kindergarten Projection Methodology) for more details on the numbers of births and how this data is utilized to project kindergarten enrollment.

Districtwide, Newton's elementary enrollment is projected to decrease to 4,621 students in fall 2027, a decline of 377 students from this year's elementary enrollment (-8\%). Three
primary factors that impact enrollment contribute to this decline: the size of the incoming kindergarten class, the size of the outgoing fifth grade class, and cohort growth. The declining sizes of kindergarten classes combined with larger classes moving to middle school, even with continued cohort growth and additional students from new residential developments, result in declining elementary projections. Although overall elementary enrollment is projected to decrease over the next five years, this decline is not consistent across individual elementary schools. Some elementary schools are projected to see growth in particular years, which is due to new residential developments in those districts.

For the second year in a row, middle schools saw a decline in enrollment this fall, which was projected. Like last year, this decline is mainly due to an incoming sixth grade class that is smaller than the outgoing eighth grade class. Middle schools are projected to decrease by 140 students next year as again, the incoming sixth grade class is smaller than the outgoing eighth grade class. Middle school enrollment totals decrease in two of the four remaining years of the projection, as larger cohorts of students move to high school and smaller cohorts come into middle school from grade 5. In fall 2024 and fall 2026, middle school enrollment is projected to increase slightly from the prior year, as the incoming sixth grade cohort in these years is slightly larger than the outgoing eighth grade cohort. Over the fiveyear projection, middle school enrollment is projected to decline by 150 students ( $-5 \%$ ), from 2,772 students today to 2,622 students in 2027. Like elementary schools, although this decline is projected districtwide, it is not consistent across middle schools. Bigelow is projected to increase in enrollment over the next five years because of the change in elementary school feeder patterns that begins in fall 2023, while the other three middle schools are projected to decrease in enrollment. Please note that the decline in enrollment projected at Day is also because of the change in elementary school feeder patterns that beings in fall 2023, as intended.

High school enrollment remained relatively stable this fall, with an increase of +4 students from last year. During the next five years, the projected average grade size at the high schools is close to 1,000 students; next year, grades 9,10 , and 11 are projected to be at or over 1,000 students and total high school enrollment is projected to increase by 83 students $(+2 \%)$. In the remaining four years of the projection, high school enrollment is projected to decrease each year, and that decrease accelerates in each subsequent year of the projection as the large cohorts over 1,000 students graduate and are replaced by smaller incoming grade 9 cohorts.

This school year has seen a large increase in enrollment from last year for students currently enrolled as English Learners (ELs). There are 782 EL students in October 2022 compared to 666 EL students in October 2021; of these, 557 are elementary students (11\% of the elementary population) and 225 are secondary students ( $3 \%$ of the secondary population.

The percentage of students receiving special education services this school year has increased slightly to $18 \%$ compared to $17 \%$ last year. If preschool students are included in the total, the percentage of students receiving special education services is $19 \%$ compared to $18 \%$ last year.

Special education students enrolled in out-of-district special education schools total 112 students based on the October 2022 Student Services Report, which includes 94 out of district placements and 18 agreements and is a decrease of 5 students from last year.

The Newton Early Childhood Program (NECP) enrolled 186 preschool children in integrated early childhood classrooms or in therapeutic services as of October 1, 2022; enrollment typically increases during the course of the year. The preschool moved into their new building at 687 Watertown Street in January 2023 and has capacity for expansion in the future.

Including preschool and outplaced students, the district's full PK-12+ enrollment totals just over 12,000 students. Section V on Student Exits and Entrances and Appendix A on Student Population Detail contain additional information on preschool and outplaced special education student populations.

This report details changes in enrollments by school since last year. It reviews current enrollments compared to the December 2021 projections, and projects enrollments using adjusted five-year historical data considered in the context of local trends in real estate sales, new developments, student mobility, birth data, census data, housing trends, and other factors. Actual 2022-23 enrollments presented in this report have changed slightly from the Preliminary Enrollment Report in October 2022, with a net decrease of -4 students.

The district has implemented two recent phases of student assignment changes to balance enrollments among district schools as first Angier and Zervas opened, followed by Cabot in 2019, each with expanded enrollment capacity. These changes, approved in September 2015 and October 2018 are now fully integrated into the projection methodology.

## Future Enrollment

The traditional cohort survival ratio methodology of enrollment projections using five-year historical data yields the projections for grades 1 through 12, although it has been adjusted this year to omit 2020 because of the impacts of the COVID-19 pandemic (and instead uses a four-year average of data from 2022, 2021, 2019, and 2018). This same adjusted methodology omitting 2020 was also used in last year's projections. The kindergarten projections have been calculated using an adjusted three-year average of previous kindergarten enrollments. Kindergarten projections have been made with a three-year, four-year, or five-year average methodology since 2014; prior to 2014, city census data was utilized for kindergarten projections. The shift to the average methodology for kindergarten occurred because city census data began producing kindergarten projections that were too low. An adjusted three-year average for kindergarten is used this year instead of a four-year or five-year average given the smaller incoming kindergarten cohorts in recent years and the declining number of births; the use of a four-year or five-year average yields kindergarten projections that are too large. See Section II entitled Enrollment Projection Method for more information and discussion of the full methodology used in this year's projection.

The table below shows the projections for the next five years, as well the current year's enrollment.

|  | Actual | Projections Using 5 Year Ratios* |  |  |  |  |
| :--- | ---: | ---: | ---: | ---: | ---: | ---: |
| Level | $\mathbf{2 0 2 2 - 2 3}$ | $\mathbf{2 0 2 3 - 2 4}$ | $\mathbf{2 0 2 4 - 2 5}$ | $\mathbf{2 0 2 5 - 2 6}$ | $\mathbf{2 0 2 6 - 2 7}$ | $\mathbf{2 0 2 7 - 2 8}$ |
| Elementary | 4,998 | 4,967 | 4,827 | 4,790 | 4,692 | 4,621 |
| Middle | 2,772 | 2,632 | 2,644 | 2,607 | 2,632 | 2,622 |
| High School | 3,947 | 4,030 | 4,023 | 3,988 | 3,901 | 3,788 |
| Total | $\mathbf{1 1 , 7 1 7}$ | $\mathbf{1 1 , 6 2 9}$ | $\mathbf{1 1 , 4 9 4}$ | $\mathbf{1 1 , 3 8 5}$ | $\mathbf{1 1 , 2 2 5}$ | $\mathbf{1 1 , 0 3 1}$ |

* The projections include a separate methodology for kindergarten based on an adjusted three-year average of previous kindergarten enrollments.

The following graph is a representation of more than 45 years of enrollment in the Newton Public Schools, from 1975 to 2022, as well as projections from 2023 through 2027. The graph illustrates the trend of sustained increases during the 1990's, then a six-year period of stability, followed by the growth trend of thirteen years, the decline over the past five years, and the projected decline for the next five years, returning Newton Public Schools to enrollment similar to the late 1990's.

## Purpose of the Report

The Enrollment Analysis Report serves as the basis upon which Newton Public Schools conducts enrollment planning throughout the year, including the identification of potential needs for elementary buffer zones to balance enrollment at schools. This report also guides planning for any changes in the use of facilities that may be necessary in upcoming years and helps to identify short-term facility needs. The enrollment projections are also used to inform the long-range facility planning in which Newton is currently engaged, extending for the next twenty years. Enrollment projections for the next school year are embedded in the budget proposals for each upcoming year. As actual enrollments become known over the course of the year, planning assumptions are re-evaluated and adjusted. The annual enrollment analysis report thus supports district planning throughout the year and helps to inform the most effective and responsive decisions possible.

## The Report

I. Enrollment Trends for the System, Elementary and Secondary - an in-depth look at system-wide and grade distribution projections.
II. Enrollment Projection Method and Accuracy of Projections - an overview and answers to commonly asked questions about the methodology.
III. Enrollment History - a discussion of past enrollment trends for the district and for the elementary, middle, and high school grade configurations.
IV. Individual School Reports - a detailed review including theoretical classroom distributions included for planning purposes to assess enrollment capacity (please note that these are not staffing patterns).
V. Student Exits and Entrances - data on student mobility in the previous school year, as well as preliminary entrance information for the current year.
VI. Non-Public School/Private School Enrollments - data on Newton school age children who are eligible to attend but are enrolled outside the district and at private schools.
VII. Class Size data.

## Appendices A through E

- Basic demographic information
- Data on preschool students
- Students in the METCO program
- English Language Learners and students receiving special education services
- Current residential properties for sale in Newton and historical property sales
- New England School Development Council's (NESDEC) enrollment projections for Newton, discussed in detail in Section II
- Elementary school students by district with buffer zones
- Enrollment by high school feeder patterns
- Current elementary, middle and high school district maps
- Projections for enrollment from permitted residential developments

# ENROLLMENT TRENDS 

## System-wide Projections

Elementary Projections
Secondary Projections
National, State and Local Trends
Rental Housing Complexes
Housing Trends in Newton
Trends in Housing Patterns of District Families
Real Estate Sales

## I. ENROLLMENT TRENDS

## System-wide Projections

Table 1 and Table 3 display the current enrollment for 2022-23 by school and by grade, as well as projections for the next five years. Tables 2 and 4 provide enrollment history and projections from 1975-76 to 2027-28, by school and by grade.

The graph below provides an overview of almost 50 years of enrollment trends with differences shown by grade level. Over the next five years, all three levels are projected to decrease in enrollment, although there are a few years in the projections where middle school and high school are projected to increase.

## Elementary Projections

Today's kindergarten enrollment of 711 students is the eighth class of fewer than 900 students since 2012. The years 2012 through 2014 saw kindergarten classes of 934, 958, and 938 students, which were the largest kindergarten classes since the mid-1970's; 2010 and 2011 also had large kindergarten classes of just under 900 students. Elementary enrollment is projected to decrease by 31 students ( $-0.6 \%$ ) next year, from 4,998 students this year to 4,967 students. In five years, overall elementary enrollment is projected to decrease to 4,621 students ( $-8 \%$ from this year) as smaller projected kindergarten classes enter the district. Enrollment projections are dependent on current student counts and trends from the past five years. With recent experience of lower kindergarten enrollment and a continuation in the decline of birth rates, projected elementary enrollment is trending lower than last year. Please refer to Section II for further information on the kindergarten projections, which are typically the most variable and challenging to project.

For the elementary school projections by grade and by school and other enrollment details, please refer to Section IV, Individual School Reports. Student assignment changes approved in September 2015 and in October 2018 are now fully integrated into the projections (with the use of a three-year average for kindergarten projections).

Appendix D, Table 11 lists student enrollment in buffer zones by school for this school year and the previous three school years. The use of buffer zones has been an effective way to ameliorate space constraints at the elementary schools and balance class sizes. Since 2011, buffer zones have been used by school administration to determine student placement between schools in the buffer zone district. Once a student from a buffer zone is placed in a school, they will follow the same feeder pattern as peers in that school. Table 11 displays each buffer zone and, for more recently created zones, notes the year the zone was developed.

## Secondary Projections

Middle school enrollment this year has declined from last year (with 2,772 students this year compared to 2,826 students last year); middle school enrollment was projected to decline this year, although the actual decline was larger than projected (projected decline of $-1.4 \%$ compared to actual decline of $-1.9 \%$ ). Middle school enrollment is projected to decrease in three of the five years of the projection as grade 6 classes enter that are smaller than the exiting grade 8 classes from the prior year. In five years, middle school enrollment is projected to decrease by -150 students ( $-5 \%$ ) compared to this year. As mentioned previously, although middle school enrollment is projected to decline districtwide, this is the not the case at each middle school. Bigelow is projected to increase over the five year projection due to the changes in elementary school feeder patterns that will be in place for fall 2023.

High school enrollment surpassed 4,000 students in 2017 and is projected to remain around 4,000 students until fall 2027. Current 2022 high school enrollment remained similar to last year (an increase of +4 students). By 2027-28, a net decrease of -159 (-4\%) high school students are expected. This decrease is not consistent across the high schools: North is projected to decrease by 207 students ( $-10 \%$ ), while South is projected to increase by 48 students ( $+3 \%$ ) in five years. Both schools are projected to have a similar increase in enrollment next fall (approximately $+2 \%$ ). The difference in enrollment between the two high schools is currently 273 students, with higher enrollment at North; this difference is projected to be 18 students in fall 2027, with higher enrollment at North. The decrease in this difference is due to the inclusion of the Northland development and the Riverside development on the Southside in the projections, which results in both larger incoming grade 9 cohorts at South from the middle schools, as well as additional high school students added to South's projections.

## National, State and Local Trends

The table below shows the status of preschool through grade 12 district enrollments for comparison districts over the most recent five-year time period. This chart also includes enrollment change from last year. Comparison districts saw enrollment changes from last year ranging from $+4 \%$ to $-3 \%$; Newton saw a decline of $-1 \%$. Compared to five years ago,

Newton's enrollment has declined -8\%, while comparison districts have a five year change that ranges from $+2 \%$ to $-16 \%$.

Massachusetts DESE School Profile Enrollment as of October 1, 2022
As previously mentioned, the state of Massachusetts has seen a - $4 \%$ enrollment decline compared to five years ago, and this decline is projected to continue over the next ten years ( $-4.5 \%$ decline projected by the US Department of Education for Massachuetts).

## Residential Housing Complexes

There are many new residential development complexes included in the projections, either recently completed or with completion expected in the near future. These include:

- Austin Street mixed-used development with 68 units
- 400 Langley Road (additional building to the existing buildings on Langley Road) with 20 units
- Trio Newton (Washington Place) on Washington Street near the intersection with Walnut Street, with 140 units
- 68 Los Angeles Street (previously 182 California Street) with 20 units
- 429 Cherry Street with 14 units
- 20 Kinmonth Road with 24 units (in construction)
- 39 Herrick Road with 9 units (in construction)
- 15-21 Lexington Street with 24 units (in construction)
- 15 Riverdale Avenue (Residences on the Charles) with 204 units (in construction)
- 967 Washington Street with 28 units (special permit approved)
- Melrose Street, 283-Turtle Lane Playhouse with 16 units (in construction)
- 1114 Beacon Street with 34 units (pre-construction)
- 32-34 Dunstan Street (Dunstan East) with 302 units (pre-construction)
- Northland on Needham and Oak Streets with 800 units (pre-construction)
- 383 Boylston Street/50 Jackson Street with 12 units (special permit approved)
- Riverside Station with 550 units (pre-construction)

Estimates for future student enrollment from the developments above are included in the five-year enrollment projections. A total of 186 elementary school students, 77 middle school students, and 82 high school students (a grand total of 345 students) from these complexes have been distributed across the five-year projections amongst all schools except for Memorial-Spaulding, Underwood, and Ward, which have no large new or pending residential developments in their districts. These additions are phased into the projections over five years, assuming that each development reaches full occupancy within five years of its planned completion date. The start date for phasing in students from a new development is dependent on the first year of occupancy for the development; these first years are displayed in Appendix E, Table 14. After five years, it is assumed that all students from a new development have been incorporated into the cohort survival ratios utilized in the projection methodology, and students are no longer manually added to the projections from that development. Newton Public Schools includes estimates for future student enrollment in its five-year enrollment projections only for projects that have received special permits or building permits. Please note that Riverside begins phasing students into the projections in fall of 2025, but that this date may be delayed due to construction costs.

A table that shows the calculation of total students for each project can be found in Appendix E, Table 14. Actual enrollment of Newton Public School students in larger developments and the accuracy of the projections for these developments are displayed in Appendix E, Table 15.

Appendix E, Table 14 consolidates information about existing, permitted, and planned development at various stages in the City of Newton. The information on project status and number of units by type has been prepared in consultation with Newton's Planning Department and is current as of December 2022. It is important to note that estimates relating to size and number of units typically change as the project progresses through the planning approval process, which can change the projected number of students from a development.

Newton Public Schools, in collaboration with the City of Newton Executive, Public Buildings, and Planning Departments, updated its methodology used in the calculation of student generation for local residential development in November 2018. The student generation ratios used prior to November 2018 by Newton Public Schools originated in the early 2000s and were based on the experience of actual student enrollment from the three largest residential complexes in Newton built since that time: Avalon Newton Highlands, Avalon Chestnut Hill, and Arborpoint at Woodland Station. A detailed description of the current methodology is available in Appendix E in the FAQ section.

The current methodology is the result of an in-depth review that was supported by expert resources, including:

- Review of residential development in other Massachusetts communities
- Review of student generation rates in West Hartford, CT
- Application of Public Use Microdata Sample (PUMS) data to understand housing patterns of families in Newton with school age children
- Demographics-based enrollment projections
- Municipal financial impact modeling

For the three largest residential rental communities in Newton at this point, the numbers of school-age children in residence are shown in the table below. Student enrollments have become fairly stable at these complexes, which were built in the early 2000's; there is an overall net increase from last year of thirteen students. This year, half of the students at the three complexes are elementary students, approximately a quarter attend middle school, and approximately a quarter attend high school. There are also 59 students residing in these complexes who are enrolled in private school ( $22 \%$ of all students in these complexes), which is higher than the percentage of students residing in residential complexes and attending private school in Newton as a whole (15\%, as explained in Section VI).

Enrollment at Newton's Largest Rental Housing Complexes (2022-23)

| Complex | Avalon at Newton <br> Highlands <br> (294 Units) | Avalon at Chestnut Hill (204 Units) | Arborpoint at Woodland Station (180 Units) | \% by <br> Level |
| :---: | :---: | :---: | :---: | :---: |
| Year Built | 2000 | 2002 | 2004 |  |
| Districted Schools* | Countryside Zervas | Bowen Mem-Spaulding | Peirce Williams |  |

| Elementary Enrollment | In District | 47 | 30 | 19 | $50 \%$ |
| :--- | :--- | :---: | :---: | :---: | :---: |
|  | Out-of-assigned District | 0 | 1 | 4 |  |
| Middle School Enrollment | In District | 19 | 17 | 11 | $24 \%$ |
|  | Out-of-assigned District | 0 | 2 | 0 | 5 |
| High School Enrollment | In District | 26 | 20 | 0 | $26 \%$ |
|  | 3 | 0 | 0 | $\mathbf{3 9}$ | $\mathbf{2 0 4}$ |
| Total Enrollment | $\mathbf{9 5}$ | $\mathbf{7 0}$ | $\mathbf{3 5}$ | $\mathbf{1 9 5}$ |  |
| Prior Year Total (2021-22) | $\mathbf{8 3}$ | $\mathbf{7 3}$ | $\mathbf{4}$ | $\mathbf{1 3}$ |  |
| Change from Prior Year | $\mathbf{1 2}$ | $\mathbf{- 3}$ | $\mathbf{1 1}$ | $\mathbf{5 9}$ |  |

* Districted schools listed are elementary schools. Student assignment at elementary school determines middle school and high school assignment. Students attend out-of-assigned district schools for a variety of reasons including educational needs, family relocation within Newton, changes in school district boundaries, or buffer zones.

## Housing Trends in Newton

The table below shows the housing types in Newton in the year before the recent enrollment growth trend began (2003-04, FY04) and compares these housing types to those available in Newton today. According to the City Assessor's office, the greatest change during this time in Newton's housing stock has been an increase of 2,068 condominium properties, which is growth of $59 \%$. Condominiums have been the result of both conversions of existing properties such as two- or three-family homes (which have decreased since FY04) as well as new construction or additions. Single family home types have been the most stable segment of the housing stock in Newton during this period.

City of Newton Housing Types

| Housing Type | FY04 | \% of Total in FY04 | FY23 | \% of Total in FY23 | $\#$ <br> Change | \% <br> Change |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| Single Family | 16,885 | $69 \%$ | 16,944 | $66 \%$ | 59 | $0.3 \%$ |
| Condominium | 3,489 | $14 \%$ | 5,557 | $22 \%$ | 2,068 | $59 \%$ |

## Trends in Housing Patterns of District Families

There have also been shifts in the housing patterns of families with Newton Public Schools children. According to Geographic Information Systems data that matches school students to housing types, more families are living in condominiums and apartment buildings today than in 2002 and fewer families are living in single family homes. The percentage of school children living in single family homes has declined from $73 \%$ to $63 \%$, while there has been an increase from $5 \%$ to $11 \%$ in the percentage of school children living in condominiums. This represents a real increase of over 650 students living in condominiums today compared to 2002. There has also been an increase in the percentage of students living in apartments, with $2 \%$ in 2002 compared to $7 \%$ in 2022 , or a total of 739 students living in apartments in 2022. Students are slightly less likely to live in two or three family homes in 2022; as the previous table shows, the number of two and three family homes in Newton has also decreased.

Newton Public School Children by Housing Type*

| Type of Housing | $\mathbf{2 0 0 2}$ | \% of Resident <br> Students | $\mathbf{2 0 2 2}$ | \% of Resident <br> Students | Change <br> $\#$ | Change <br> $\mathbf{\%}$ |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| Single Family | 7,777 | $73 \%$ | 7,187 | $63 \%$ | -590 | $-8 \%$ |
| Two/Three Family | 1,671 | $16 \%$ | 1,662 | $15 \%$ | -9 | $-1 \%$ |
| Condominiums | 526 | $5 \%$ | 1,191 | $11 \%$ | 665 | $126 \%$ |

## Real Estate Sales

According to data obtained from City of Newton records, there have been 1,096 residential property sales so far in calendar year 2022 (through October 31, 2022) versus 1,528 in 2021. Combined with the number of homes currently advertised for sale in Newton (101 homes as of December 2022; please see Table 9 in Appendix B for details), home sales in 2022 may likely be lower than 2021 (please note that this may omit homes that are

## Enrollment Analysis Report

pending sale at the time that the data was collected). Calendar year 2021 had the highest number of home sales in the past 17 years. Appendix B, Table 8 shows home sale data by elementary school district.

Additional information is provided in Table 9 of Appendix B with properties listed for sale by school district in Newton as of December 2022; there are 101 properties listed for sale in Newton. At a similar time last year, there were 98 properties listed for sale. Forty-seven percent of the properties listed for sale in Newton are single family homes, with most of these homes ( $89 \%$ of the listed homes) having four or more bedrooms. Half of the properties for sale are condos, with $37 \%$ of those listed four bedrooms or more. The distribution of type of property on the market by school district is also provided in this table for reference. For example, in the Peirce school district, 100\% of properties listed for sale are single family homes, while in the Cabot school district, $50 \%$ of properties for sale are single family and $50 \%$ are condominiums.

# ENROLLMENT PROJECTION METHOD 

Kindergarten Projection Methodology<br>NESDEC Comparison<br>Accuracy of Projections

Frequently Asked Questions

## II. ENROLLMENT PROJECTION METHOD

The enrollment projections are typically prepared by combining the current year's official enrollment as reported on October 1, 2022 to the Department of Elementary and Secondary Education with other available demographic data for Newton. A model of fiveyear average cohort survival ratios is applied to the current enrollment data (in grades one through twelve). The projections are calculated on an individual school and grade basis and then aggregated into system-wide projections. Adjusted three-year averages are used for kindergarten this year, as explained later in this section.

For the cohort survival ratio methodology, a cohort is defined as a group of students in a specific grade level who are at a specific school or are all going to the same school in the next year. To calculate the cohort survival ratio for a particular grade level in a particular year, the number of students enrolled in the cohort for the current year is divided by the number of students in that cohort from the prior year. These cohort survival ratios for each grade level and school in Newton for the past five years are averaged to calculate the fiveyear average cohort survival ratios for each grade level and school. These ratios are then applied to this year's current resident enrollment at each grade and school to calculate the projections for the next five years. Non-resident students are not included in the cohort for the cohort survival ratio calculation but are added to the total projection for the next five years after the cohort survival ratio is applied to the current year's enrollment. For example, assuming that the five-year average cohort survival ratio for Bowen, MemorialSpaulding, and Zervas grade 5 students moving on to grade 6 at Oak Hill is 0.97 and there are 232 resident students in this group, the cohort calculation would yield 225 ( $232 \times 0.97$ ) students. Eight current non-resident students would be added to this total, resulting in a final projection of 233 students for students entering the $6^{\text {th }}$ grade at Oak Hill next year.

This year's projections use a modified five-year average cohort survival ratio methodology like last year, given the large enrollment decline in 2020 primarily due to the COVID-19 pandemic. Rather than include the 2020 cohort survival ratios in the five-year average (which are very low and would decrease the five-year average ratios), the 2020 cohort survival ratios are omitted and four years of cohort survival ratios are used (including 2022, 2021, 2019, and 2018).

The following factors are integrated in the projections:

- School feeder patterns, district boundaries and buffer zones reflect current School Committee policies. Student assignment policy changes for the Angier, Zervas, and Cabot districts, and the effects on nearby school districts, were approved in September 2015 and October 2018 and are fully integrated into the projections.
- Students participating in the METCO program are added to each school and grade after the average cohort survivals ratios are applied. Students participating in the METCO program who will enter the system in kindergarten, grade one, or grade two each year for the next five years are also included in the individual school tables by grade.
- The number of entering middle and high school students is based on percentages of students from lower grade level schools to reflect districting, out-of assigned district placements, and buffer zones.
- The number of potential students from new residential properties is calculated and added to each school and grade after the average cohort survival ratios have been applied when special permits or building permits have been issued by the City of Newton.

## Kindergarten Projection Methodology

The following two charts provide historical data on kindergarten enrollment. The first chart shows the highest kindergarten populations of the past fifty years. The 2022-23 kindergarten class of 711 marks an eighth year of declining kindergarten enrollments, a shift from the three recent years of kindergarten enrollment over 900 students, of which the 2013-14 enrollment was the peak. The second chart illustrates the trend over time of how Newton's four-year old population (documented on the City census) relates to the kindergarten population. This ratio has been rising due to decreasing numbers of age 4 children on the census compared to the number of kindergarten students each year. The number of 4 -year olds on the city census has been under 600 children since 2013 , when previously 600 to 700 children were typically recorded in each year.

| Highest Kindergarten Populations of Past 50 Years |  |
| :---: | :---: |
| Time Period | Number of K Students |
| $1970-71$ | 1,155 |
| $1971-72$ | 1,063 |
| $1972-73$ | 1,010 |
| $1973-74$ | 968 |
| $1974-75$ | 998 |
| $1975-76$ | 946 |
| $2013-14$ | 958 |
| $\mathbf{2 0 2 2 - 2 3}$ | $\mathbf{7 1 1}$ |
| 50 year average | 802 |
| 20 year average | 843 |
| 10 year average | 806 |

Age Four to Kindergarten Ratio

| Year | 2007 | 2008 | 2009 | 2010 | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 4-year olds (prior year census) | 744 | 683 | 686 | 705 | 708 | 682 | 615 | 554 | 567 | 473 | 509 | 544 | 487 | 481 | 411 | 364 |
| K population | 868 | 830 | 862 | 896 | 895 | 934 | 958 | 938 | 877 | 885 | 850 | 848 | 825 | 674 | 738 | 711 |
| Ratio | 1.17 | 1.22 | 1.26 | 1.27 | 1.26 | 1.37 | 1.56 | 1.69 | 1.55 | 1.87 | 1.67 | 1.56 | 1.69 | 1.40 | 1.80 | 1.95 |

Next year's kindergarten projection of 704 students is calculated using an adjusted threeyear average of the previous kindergarten enrollments, a more conservative approach than using the four-year or five-year average. As in grades 1-12, the 2020 school year is omitted from the three-year average for kindergarten. The adjusted three-year average methodology for kindergarten uses kindergarten classes from 2019, 2021, and 2022. This three-year average captures experience with kindergarten populations in the more recent past and excludes some of the larger kindergarten classes of four and five years ago (above 800). Similar to the average cohort survival ratio methodology, the three-year average for kindergarten students is calculated for resident students by elementary school, and projected non-resident student counts are added to each year's projection after the average
has been calculated. This kindergarten projection is then used to calculate a birth to kindergarten ratio for each year of the projection, which can be compared to historical ratios to identify if any adjustments need to be made to the kindergarten projection. If the birth to kindergarten ratio is much higher or lower than recent experience, manual adjustments are made to the kindergarten projection in a particular year of the projection so that the birth to kindergarten ratio reflects recent experience. Because the number of births has been declining, an adjustment has been made to the projected number of kindergarten students in each of the next five years to bring the birth to kindergarten ratios in line with recent experience. This adjustment was made by individual elementary school, proportionate to the percentage of housing within an individual elementary school district (adjusting for buffer zones) while also considering the number of home sales and homes currently for sale within that district. The adjustment was largest for fall 2024 because of the low number of births for that kindergarten class (birth year of 2019), resulting in the lowest kindergarten projection across the five-year projection (617 students).

In the past, the kindergarten projection method has incorporated city census data on children age 4 . However, in recent years, this data has not been a good predictor of the number of kindergarten students and therefore is not included in the methodology.

Resident births to kindergarten ratios are displayed below. Comparing each year's kindergarten population to the number of state-recorded Newton births five years prior yields a birth to kindergarten ratio. The 663 resident births in 2018 and the projected kindergarten class of 704 students next year produce a ratio of 1.06 , which is slightly higher than the actual five-year average birth to kindergarten ratio (omitting 2020). With the omission of 2020, the actual five-year average birth to kindergarten ratio is 1.04 and the actual ten year average birth to kindergarten ratio is 1.08. The birth to kindergarten ratios in the last three years of the projection are slightly higher than the first two years given the increase in residential developments and increase in home sales in 2020 and 2021.

Resident Births* to Kindergarten Ratios

| Birth Year | Births to Kindergarten Ratios |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |

## NESDEC Comparison

The enrollment analysis report includes projections for the Newton Public Schools from NESDEC (the New England School Development Council) as comparative data. In total by all grade levels, NESDEC's enrollment projections for 2023-24 are very similar to Newton's projections (NESDEC projects three fewer students than Newton). NESDEC uses a five-year average of Newton resident birth data to project kindergarten enrollment five years later; to project kindergarten enrollment in the last year of the projection, NESDEC uses estimated numbers of births. Please see Table 10 of Appendix C for more detail.

The divergence between Newton's and NESDEC's overall projections for the next five years grows in each of the projection as shown in the graph below, mainly due to Newton's larger projections for the elementary level in each year. This is partially due to Newton's larger kindergarten projections in each year, which move through the grade levels in each year of the projection.

NESDEC's kindergarten projections are similar to Newton's, albeit slightly smaller, as shown in the graph below. As mentioned previously, the birth data from the Massachusetts Registry of Vital Records and Statistics documents 580 resident births in 2019, which is a large decline from 663 resident births in 2018 and 696 resident births in 2017. This results in a much lower kindergarten projection for FY25 for both Newton and for NESDEC.

There are two additional differences between NESDEC's projection methodology and Newton's. First, NESDEC's projections are calculated by total grade rather than by school and by grade. Second, NESDEC uses different cohort survival ratios for all grades influenced by their regional experience of school districts whereas Newton uses a five-year ratio based on Newton-specific data for grades K through 12.

## Accuracy of Projections

Several tables are included to show how accurately Newton Public Schools projections match actual enrollment. The table below shows the projections for the current year (2022-23) by grade level compared to projections one, two and three years ago.

Projection History for 2022-23 (FY23)

| Date Projected | Elementary | Middle | High School | Total |
| :--- | :---: | :---: | :---: | :---: |
| Fall 2019 | 5,405 | 2,962 | 4,146 | 12,513 |
| Fall 2020 | 5,299 | 2,886 | 4,065 | 12,250 |
| Fall 2021 | 4,999 | 2,787 | 3,927 | 11,713 |
| Actual October 2022 | 4,998 | 2,772 | 3,947 | 11,717 |

Table 5 provides a one-page summary of last year's projections by school. Table 6 provides school and grade detail comparing the 2022-23 enrollment to the projections made last year. Table 7 provides actual enrollment, corresponding projections, and percentage variance for each of the past five years since 2017-18, as well as the projections through 2027-28.

TABLE 5
COMPARISON OF OCTOBER 2021 AND OCTOBER 2022 ENROLLMENTS AND COMPARISON OF PROJECTED WITH ACTUAL OCTOBER 2022 ENROLLMENT

## Frequently Asked Questions

## 1. Why do we need to know how many students may be attending each school in Newton in future years?

Enrollment projections are useful for decision-making and planning, especially in light of enrollment changes and residential development. Carefully crafted, presented and interpreted projections are a key first step in the planning process. The district is then able to plan the budgets, including capital improvements, classroom space requirements, sufficient teacher workforce and staffing, instructional materials, transportation and so forth. Accurate projections alert the district to changes in school population to allow for needed adjustments. In addition to the projections, school principals provide critical data on enrollments and registrations each spring. These projections help communities to better understand the impact of trends and changes in enrollment, migration, and births on school population. All projections are based on underlying assumptions that use historical school enrollment and census data.

## 2. Why can't the principals count the students who are in their school and add the students who are coming next year?

This technique may work very well in small, stable communities for a single year's projection. However, larger communities like Newton, with a need for long-term planning, require more complex approaches in order to project enrollment trends some years into the future. Research done on Newton's high school enrollment showed that a significant number of students enter and exit the system during the school year and during each summer. Reliance on class lists would provide a less accurate picture than the use of a statistical model that accounts for movements in and out of each school and the system as a whole. It is worth noting that Newton's elementary school principals submit expected numbers of pupils in May and June so that planning for classrooms and teaching staff can proceed with the most recent information.

## 3. What procedures are used in other school systems across the United States?

Most school systems use the "Cohort Survival" method, or some variation, as the technique to provide enrollment projections. The basic unit used in this technique is the ratio, a measure that expresses the relative size of two numbers. The cohort survival ratio method models and calculates the flow of a cohort or age group of pupils through the system from one grade to the next over a number of years.

The ratios are influenced by several variables--census data, birth rates, student entrances, exits, and transfers, non-public school enrollment patterns, frequency of promotions or retentions, drop-out rates, the proportion of the city school-age population, housing patterns, the number of building permits issued, and other urban trends. Because these variables change from year to year and from school to school, an average ratio of three to five years is used to project for the future. The more stable the community or the individual school neighborhood, the easier and more reliable the projections.

The advantages of this type of model are: (1) it captures the multiple forces which affect population changes (move-ins, move-outs, transfers between schools); and (2) it distinguishes changes in each age group rather than looking at a composite of all changes.

A limited number of school systems have prepared enrollment projections using other procedures. For example, regression analysis utilizing the same predictors - births and past tendencies of school children to advance from one grade to the next - can be employed. Other methods include growth technique (establishes a district level enrollment curve based on ratios, migration, retention, drop-outs, private school enrollment, etc.); historical comparison of dwellings to enrollment used to base projections; method of analogy (analysis of national trends or local growth influence on district enrollment); and the multiple factor method (study of social and economic factors' influence on enrollment).

## 4. What procedure historically has been utilized in Newton?

The cohort survival ratio method for system-wide projections with adjustments, if appropriate, at the school level has been used for many years. In the past, a combination of three-year, four-year, and five-year average ratios has been used, with the greatest variation in the kindergarten projection method. The method consistently has relied upon five-year ratios for grades 1 through 12 in order to provide a consistent timeframe for the model across all schools and to take advantage of a full five years of experience. The method used to project kindergarten has relied upon a combination of approaches to arrive at the most reasonable projection, given high variability in class size. In the past for kindergarten projections, Newton has used city census data for the number of children aged 3 or 4 years as compared to the kindergarten population two years hence, but this has not been possible in recent years.

## 5. How accurate are projections?

The quality of the data influences the accuracy of the projections. Cohort survival relies on data that is usually readily available and reasonably reliable - census data on births and past enrollments.
"Goodness of fit," a measure of the percentage of error, is determined by dividing the difference between the actual and projected enrollment for each level by the projected enrollment figure. The errors are the magnitude of the percentage difference between projected and actual enrollments. A small percentage of error is preferred. Research literature indicates that total school district enrollment may be projected with an accuracy of plus or minus $1 \%$, yet an individual school's error rate might exceed $10 \%$. Past systemwide error rates in Newton have been low, at around $+/-1 \%$, while grade level and schoolbased projections have been higher.

In summary, short-term projections are generally more accurate than long-term projections. Projections for districts with larger enrollments are more accurate than those for smaller districts. System-wide projections are more accurate than individual school projections. Error is especially important to consider when reviewing the data beyond five years in the future. These projections, at best, provide only the direction or trend enrollments will take into the future. This is because beyond the fourth year of the
projection, elementary enrollments must be based on predicted births in a calendar year that is not yet complete, and for which data has not yet been $100 \%$ collected. Secondary level enrollments can be projected beyond that point with a greater assurance of reliability.

# ENROLLMENT HISTORY 

Grade-by-Grade Analysis

## A Comparison to Peak Enrollment Years

## III. ENROLLMENT HISTORY

This section of the report looks at historical enrollment patterns in two ways. The first is on a grade-by-grade basis, tracking the in- and out-migration of students as each kindergarten class moves through the system. The second provides a look at current enrollment as compared with peak enrollment years.

## Grade-by-Grade Analysis

Table 8 shows the changes in size of each grade cohort from 2021-22 to 2022-23.
Table 9 shows Newton's historical cohort survival ratios by grade from 1991-92 through 2022-23. This table shows the net in- and out-migration patterns for each grade level. Ratios greater than one indicate growth and ratios less than one indicate a decrease in the cohort. Over the years (except for 2020-2021), each cohort moving from K-1 has a survival ratio greater than one, indicating net in-migration. In the past five years, the ratio from grade K-1 has been high, (1.06 or higher, except for 2020-2021), underscoring Newton's consistent experience of cohort growth in early elementary grades. The average cohort growth of K-1 and 1-2 is a ratio of 1.09 this year, which is higher than in recent years, except for last year, which was mainly because of the very small kindergarten class in 2020.

This year's ratio of 0.98 from grade 5-6 is typical of most recent years; in past years and in this year, the transition from elementary school to middle school has been marked by net out-migration between grades 5 to 6 , as some students leave to enroll in private schools. Conversely, the transition from grade 8 to high school has historically shown a net inmigration as students enter the public schools during this transition year. This year's ratio from grade 8 to grade 9 is 1.02, similar to the ratio of the past two years.

## A Comparison to Peak Enrollment Years

The total 2022-23 enrollment of 11,717 is $64 \%$ of the 1967 peak enrollment of 18,424 . At the beginning of the most recent growth trend in 2004, the district's enrollment of 11,268 students was $61 \%$ of the 1967 peak year.

| $\frac{\text { Peak }}{\text { K-12 }}$ | $\underline{\text { Enrollment }}$ | 18,424 | $\frac{\text { Year }}{1967}$ |  |

## INDIVIDUAL SCHOOL REPORTS

## IV. INDIVIDUAL SCHOOL REPORTS

The individual school reports contain the following information:

## Elementary Schools

1. Enrollments by grade for last year (2021-22) and this year (2022-23) and the change in enrollment at each grade level. Enrollment projections by grade for the next five years (2023-24 to 2027-28) are also reported based on an adjusted 5-year cohort survival ratio average for grades 1 through 5 and an adjusted 3-year average for kindergarten.
2. Ten years of kindergarten and total school enrollments, with five years projected.
3. Actual and projected classroom distributions for five years including, for next school year, average class sizes and maximum class sizes by grade. The projected classroom distributions are theoretical and are for planning purposes to assess enrollment capacity and to plan for the utilization of buffer zones as necessary to balance enrollment.
4. A line graph depicting enrollment history over time and for projections (5 years).

## Middle Schools

1. Enrollments by grade for last year (2021-22) and this year (2022-23) and the change in enrollment at each grade level. Enrollment projections by grade for the next five years (2023-24 to 2027-28) are also presented based on 5-year cohort survival ratio averages.
2. Ten years of enrollment change.
3. Number of 5th grade students from feeder elementary schools who will enter the 6th grade next year in 2023-24.
4. A line graph depicting enrollment history over time and for projections (5 years).

## High Schools

1. Enrollments by grade for last year (2021-22) and this year (2022-23) and the change in enrollment at each grade level. Enrollment projections by grade for the next five years (2023-24 to 2027-28) are also presented based on a 5-year cohort survival ratio average.
2. Ten years of enrollment change.
3. Number of 8 th grade students from feeder middle schools who will enter the 9th grade next year in 2023-24.
4. A line graph depicting enrollment history over time and for projections (5 years).

## V. STUDENT EXITS AND ENTRANCES

## STUDENT EXITS AND ENTRANCES

This section reports on student mobility in the Newton Public Schools due to the movement of students not resulting from grade promotion. The student mobility statistics reported below illuminate the annual cycle of new student entrances and student exits in the district and how net migration can affect total enrollment. In addition, exit and entrance statistics further detail the extent and the type of student mobility changes that are experienced by schools during the course of a full academic year; thus, student mobility statistics reported in this section cover the entire 2021-22 school year, in contrast to most of the other statistics in this report, which are reported as of a moment in time (October $1^{\text {st }}$ ). This year, the methodology has been changed slightly to include summer exits in the upcoming school year's statistics to accurately reflect the school year calendar. Previously, summer exits were included with the prior school year's data. For example, exits in summer 2021 are now included with the 20212022 data instead of the 2020-2021 data (meaning that the data displayed for 20212022 covers July 2021-June 2022). Prior year data in these tables has been adjusted based on this methodology.

The table below displays three years of exit and entrance history. The 2021-22 school year shows a small positive net migration in contrast to the large negative net migration of 2020-21, which is likely due to the COVID-19 pandemic (this time frame covers July 2020-June 2021). The percentage of student exits is still higher than pre-pandemic, although it has decreased from the 2020-21 school year. The percentage of entrances in 2021-22 is higher than the previous two years. Please note that the net migration covers the entire school year, while most of the enrollment statistics presented in the rest of this document focus on October $1^{\text {st }}$ of a given year. The small positive net in migration for 2021-22 indicates that even though enrollment as of October 1, 2022 declined from the prior year, over the course of the entire year, there was a higher number of entrances than exits. Although data for the 2022-23 school year will not presented until next year, entrances through October 1, 2022 (July 2022-October 2022) total 634 students and exits through October 1, 2022 (July 2022-October 2022) total 600 students, providing an early indicator of possible positive net in migration for the 2022-23 school year.

| Annual Student Mobility | $\mathbf{2 0 1 9 - 2 0}$ | 2020-21 | 2021-22 |
| :--- | :---: | :---: | :---: |
| Number of Student Exits | 640 | 1088 | 900 |
| Percentage of Enrollment | $5.1 \%$ | $9.1 \%$ | $7.6 \%$ |
| Number of Student Entrances | 852 | 621 | 997 |
| Percentage of Enrollment | $6.8 \%$ | $4.9 \%$ | $8.4 \%$ |
| Net In Migration (Out Migration) | 212 | -467 | 97 |

There are a number of students who both enter and exit the Newton Public Schools within a single year. During the 2021-22 school year, 148 students, or $15 \%$ of the total entrances, both entered and left the Newton Public Schools. This is similar to the percentages from 2019-20 and 2018-19 (19\% and 20\%, respectively). During the 2020-

21 school year, $8 \%$ of total entrances both entered and exited the Newton Public Schools; this lower percentage was mainly due to the smaller number of students who enrolled from outside the country than usual.

The following table displays both the entrance and exit reasons for the students who both entered and exited in 2021-22. The majority of these 148 students enrolled from Massachusetts (39\%), while the remainder enrolled from outside of Massachusetts, from outside the country, or from private school. The majority of these 148 students exited because they moved out of Newton (59\%), while the remaining students moved out of the country, left to attend private school or for other reasons. As displayed in the table, the largest group of entering and exiting students enrolled from outside of Massachusetts and moved out of Newton during 2021-22 (35 students, or 24\% of the students who entered and exited), followed by students who enrolled from another Massachusetts community and moved out of Newton (26 students, or 18\%).

Students who both entered and exited in 2021-22

| Entered from | Exited to |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Moved out of the <br> Country | Moved out of <br> Newton | Left to <br> Attend Non- <br> Public <br> School | Left Due to <br> Special <br> Education <br> Placement | Other <br> Reasons** | Total |
| Enrolled from MA* | 11 | 26 | 9 |  | 3 | 49 |
| Enrolled from outside <br> of MA | 3 | 35 | 7 |  | 2 | 47 |
| Enrolled from outside <br> the Country | 16 | 24 | 1 |  | 1 | 42 |
| Enrolled from Private <br> School | 1 | 2 | 5 | 2 |  | 10 |
| Total | 31 | 87 | 22 | 2 | 6 | 148 |

*The majority of students in this category have enrolled from another MA community and some have enrolled from an origin that is unknown.
**Other includes non-resident student transfers, home schooled students, students who dropped out, and deceased students.

## Student Exit Statistics

In 2021-22, a total of 900 students, or $7.6 \%$ of the total enrollment, left their schools between July 2021 and June 2022, not including graduates. Overall, the greatest number of student exits resulted from students moving out of Newton or students leaving to attend non-public schools, although this is not consistent across all grade levels. At the elementary level, the largest number of student exits resulted from students moving out Newton. At the middle and high school levels, the largest number of student exits resulted from students leaving to attend non-public schools. Of the three grade levels, elementary schools saw the most student exits as a percentage of total enrollment ( $9.4 \%$ of elementary enrollment), followed by middle schools ( $8.7 \%$ of middle school enrollment), and high schools ( $4.5 \%$ of high school enrollment), the same pattern as the prior three. The following tables provide the total number of exiting students by school and grade level, and by reason for exit for 2021-22. The number of
exits during the 2020-21 school year and the total exits for 2021-22 are provided for comparison.

*Other includes non-resident student transfers, home schooled students, students who dropped out, and deceased students.

A three year history of student exits is shown below. Exits at all three levels are still higher as a percentage of total enrollment than pre-pandemic, although exits at elementary schools and high schools have decreased compared to 2020-21. Exits at the middle school as a percentage of total enrollment are higher than 2020-21.

TABLE 13
TOTAL STUDENT EXITS

Table 14 provides a history of student exits to private schools at the elementary, middle and high school levels since 2015-16. It includes a breakout of the number and percentage of exits in transition years after the completion of elementary school (grade 5) and middle school (grade 8). In 2021-22, 29.8\% of students who left elementary schools to attend private school did so in or after grade 5, which is an increase from 2020-21, although it is still lower than pre-pandemic years, as the total number of exits was still higher than pre-pandemic in 2021-22. Of the students who left their middle school to attend private school, $33.6 \%$ transferred in grade 8, also a slight increase from 2020-21, but still lower than pre-pandemic years, again because the total number of exits has increased at middle school. Exits to non-public schools at the high school level are still higher than pre-pandemic, although it is the lowest percentage of the three levels.

TABLE 14
HISTORY OF EXITS TO NON-PUBLIC SCHOOLS

| LeveI | Academic Year |  |  |  |  |  |  |  |

*Statistics on Grade 5 and Grade 8 exits are provided to highlight grade level transition years.

## Student Entrance Statistics

There were 997 students, or $8.4 \%$ of total enrollment, who entered Newton Public Schools in 2021-22 who had not been students in the previous academic year, not including kindergarten entrances in the fall. This is an increase of 376 students from the prior year, when there were 621 student entrances, or $4.9 \%$ of total enrollment.

The following tables provide the total number of entering students by school and grade level, and by reason for enrollment and/or origin of the enrolled student. In 2021-22, new students who enrolled in Newton Public Schools were most frequently enrolling from another Massachusetts community, as in the prior year.

Total entrances as of 2020-21, 2021-22, and October 1, 2022 are included for comparison. Overall, the number of student entrances as of October 1, 2022 is 634 students, which is lower than the number as of October 1, 2021 (which was 729 students). The number of student entrances as of October 1, 2020 was 422 students (please note that incoming kindergarten students are not included in these tables).

## VI. NON-PUBLIC/PRIVATE SCHOOL STUDENTS

## NON-PUBLIC/PRIVATE SCHOOL STUDENTS

This section reports on school-age children residing in Newton who are attending nonpublic or private schools. A census of non-public school students is conducted each January, as required by Massachusetts law, and provides information on where Newton's school-age population is attending school outside of Newton Public Schools. This includes private independent schools, private special education schools, other public schools, charter schools, or students who are home schooled. Special education students outplaced by Newton Public Schools are included in the census. The data reported in this section is based on the 2022 non-public school student census conducted in January 2022 during the 2021-22 school year.

Based on the 2022 census, $23.1 \%$ of the school-age population, or 3,539 students, were enrolled in non-public schools in 2021-22. This is a small percentage increase from the previous year, when $22.9 \%$ of the school-age population ( 3,547 students) was enrolled in non-public schools. The overall school-age population in Newton decreased by 108 students from 2020-21 to 2021-22 (from 15,457 to 15,349 ), or $-0.7 \%$.

Figures 1 and 2 display the history of enrollment in non-public schools for Newton residents. These figures show that the number and percentage of the school-age population in Newton enrolled in non-public schools increased in 2020-21 and remained at this level in 2021-22.

The chart below shows the breakdown of non-public school enrollment by type of school in 2021-22. The majority of the school-age population in Newton that is enrolled in non-public schools is enrolled in private schools in Massachusetts, which is typical.

PERCENT OF NON-PUBLIC SCHOOL ENROLLMENT BY TYPE OF SCHOOL

| Special <br> Education <br> Collaborative | Charter <br> School | Other Public <br> School | Home <br> Schooled | In-State <br> Private School | Out-of-State <br> Private School |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $<1 \%$ | $<1 \%$ | $1 \%$ | $2 \%$ | $96 \%$ | $<1 \%$ |

The remainder of this section examines non-public school enrollment at the three grade levels and by districted Newton school.

The percentage of the school-age population attending non-public schools at the elementary, middle, and high school grade levels over time is illustrated in Figure 3 below. There is a consistent history of higher rates of enrollment in non-public schools at the secondary grade levels (grades 6-12), where approximately $25 \%$ of the schoolage population is enrolled in non-public schools in 2021-22. At all three levels, the percentage of the school-age population enrolled in non-public schools increased in 2020-21 and remains at this level in 2021-22, although the elementary school percentage has decreased slightly from 2020-21.

Three additional tables are included in this section. Table 18 displays non-public school enrollment by grade and Table 19 presents this information further separated by districted school. Table 20 displays the distribution of Newton Public Schools students who are placed out-of-district as of the time of the census due to the special education needs of the students by grade level and districted school. Highlights of these tables are described below:

- The number of students enrolled in non-public schools decreased at the elementary and middle levels, while high school increased compared to 2020-21.
- Grade 6 and grade 9 are both transition years in Newton. Grade 6 saw an increase in the percentage of students enrolled in non-public schools from the prior year ( $26.1 \%$ of $6^{\text {th }}$ graders compared to $23.1 \%$ in the prior year). Grade 9 also saw an increase in the percentage of students enrolled in non-public schools from the prior year ( $28.4 \%$ of $9^{\text {th }}$ graders compared to $22.7 \%$ in the prior year).
- Enrollment of students with special education placements attending private schools, special education collaborative programs, or other public schools decreased from 2020-21, from 126 to 113 students, a 10\% decrease (-13 students total). For detailed special education enrollment statistics, please refer to Appendix A, Table 6.

| 12 | 284 | 22.2\% | 302 | 22.5\% | 18 | 6.3\% | 6 | 2.0\% |
| SP | 22 | 42.3\% | 29 | 49.2\% | 7 | 31.8\% | 7 | 31.8\% |
| Total | 1,195 | 23.2\% | 1,314 | 25.0\% | 119 | 10.0\% |  |  |
| Grand Total | 3,547 | 22.9\% | 3,539 | 23.1\% | -8 | -0.2\% |  |  |

Change from the prior year compares the same grade level from one year to the next year (these are different groups of students). Cohort change from the prior year compares the size of the same cohort of students from one year to the next year (i.e., last year's first graders compared to this year's second graders).

## VII. CLASS SIZE DATA

## CLASS SIZE STATISTICS

The class size statistics presented in this section are as of October 1, 2022 for elementary and middle schools, and as of October 15, 2022 for high schools. Historical and current year data on class size averages and the distribution of large and small classes are shown in Table 21 and Table 22. These tables illustrate trends in average class sizes over the past ten years and trends in the distribution of class sizes for the past four years. As shown in Table 21, class sizes have increased slightly at the elementary level this year, although the overall average class size is still one of the lowest in ten years. Class sizes at the middle schools and high school have also increased slightly. Table 22 shows a decrease in the percentage of small classes (fewer than 20 students) at all three levels and slightly increases in the percentage of larger classes ( 25 students or more) at the middle and high school levels.

## ELEMENTARY SCHOOL CLASS SIZES

The elementary school average class size has increased slightly to 19.4 students (see Table 21). The ten-year peak in elementary school class size averages was 21.2 students in the 2013-14 school year. Class sizes at the elementary schools range from 13 to 24 students. Please note that grade 5 at Ward began the year as one classroom of 27 students; as of January 1, 2023, it is two classrooms of 13 and 14 students each. The table below includes both grade 5 classrooms at Ward.

Table 23 summarizes overall enrollment by building and includes enrollment of students requiring special education services and English Language Learners for each school.

## MIDDLE SCHOOL CLASS AND TEAM SIZES

In middle school, overall average class size has increased slightly from last year to 20.7 students (see Table 24). The middle school average team size has decreased slightly to 85 students (last year it was 87 students), with average grade level team sizes at individual schools ranging from 73 to 95 students (see Table 24a). For an eleventh consecutive year, there are no teams of over 100 students.

The middle schools are continuing to maintain previous improvement in both average class size and the number of large classes after a peak in 2011-12. Three prior years of average class sizes are provided in Table 24.

The individual school charts in Table 24 show that Bigelow, Day, and Oak Hill have overall average class sizes that have increased slightly from last year, while Brown has decreased slightly. The percentage of large classes of 25 or more students ranges from 1\% (at Brown) to $6 \%$ (at Day). All four middle schools have the majority of their classes in the range of 2024 students.

## HIGH SCHOOL CLASS SIZES

At the high school level, the average class size for the five major subjects (English, World Languages, Science, History \& Social Science, and Mathematics) has increased slightly to 22 students (see Table 21), with the number of high school classes with 25 or more students also increasing to $28 \%$ (see Table 22).

This year, the overall average class size at Newton North has increased slightly to 21.9 students (compared to 21.6 students last year) and the overall average class size at Newton South has increased slightly to 22 students (compared to 21.7 students last year). The difference in average class size between the two high schools is 0.1 students, the same as the past two years. Typically, North tends to have a lower average class size than South due to higher enrollment numbers in the College Prep (CP) level of classes, which require smaller class sizes. Table 25 displays average class sizes for the five major academic departments for each school, as well as historical comparisons, and provides a distribution of class sizes for the five major academic departments.

[^3]During the annual budget process, high school class size data is used in a planning model designed to produce equitable class sizes at the two high schools. The differential in enrollment in CP level classes is evaluated annually. Factors that are finalized during the late spring and summer, after the completion of the budgeting cycle, ultimately result in the actual class size statistics at the high schools. These factors include: class enrollment decisions of students, staffing decisions including the distribution of faculty based on enrollment, shifts in actual enrollment versus projections, and the rate of enrollment by department.

This year, similar to the prior five years, the lowest average class sizes at North are in the World Languages Department, with an average class size of 19.7 students, followed by the English Department, with 20.4 students. At South, the lowest average class size is also in World Languages with 21.1 students, followed by English with 21.7 students. At North, the highest average class size is in Mathematics, with 23.6 students. At South, History and Social Science and Mathematics have the highest average class sizes of the major academic disciplines at 22.6 students each.

Table 26 details the average class sizes by curriculum level for each of the five major academic areas. It includes the overall average class size for each curriculum level for all five major academic areas combined, as well as overall average class sizes for each academic department and for the school. Table 27 provides a detailed view of class enrollment that totals the five academic areas by curriculum designation, including special education classes, for each high school for the current school year and for last year. Please note that Curriculum I and Curriculum II levels were renamed Advanced College Prep (ACP) and College Prep (CP) in 2014-15.

Table 28 shows total student enrollment by curriculum level for each of the five major academic areas, as well as the school overall.

Table 29 displays a detailed distribution of sections of courses within the five major academic areas with 25 or more students. The number of large classes at the high schools overall has increased this year to $28 \%$ from $23 \%$ last year.

Tables 30 and 31 detail the individual course enrollments by department (Table 30 for North and Table 31 for South). These tables include a complete catalogue of high school course offerings. The tables provide the following information for each course:

1. Curriculum level for each course
2. Total course enrollment
3. Number of sections for each course
4. Average class size for each course
5. Distribution of class sizes for each course

Tables 32 and 33 display total enrollment by department and include the enrollment rate for courses in each department, including certain courses that are not included in the calculation of average class size for each department (these are courses marked with a $\sim$ in Table 30 or 31). Tables 32 and 33 include enrollment in ELL, special education, and special
program courses offered in each department to provide an accurate enrollment rate in each department (these courses are not included in average class size calculations due to their small class sizes specific to the services that they provide). The enrollment rate for each department measures the number of students enrolled in departmental courses compared to the total enrollment of the school, providing an indication of the frequency with which students enroll in courses in each department. For example, an enrollment rate of 1.00 in a department indicates that on average, every student in the school is enrolled in a course in that department (please note that this is an average, as the enrollment in each department is a total count of all enrollments, and may include students who are taking more than one course in that department).

Tables 34 and 35 display projected future class sizes for the five major academic areas by curriculum level for each high school (Table 34 for North and Table 35 for South). The projected average class sizes in these tables use the projected enrollments for each school from January 2023. They also assume that enrollment patterns by department and curriculum level will remain the same in future years (meaning that the same percentage of students will enroll in courses by department and curriculum level in future years as 202223 percentages) and that the number of sections offered in future years will remain the same as 2022-23. The tables also include a column calculating the change in the number of sections required for each department and curriculum level to maintain the current average class size. These tables are intended for planning purposes only and do not represent staffing patterns for each school.

Tables 36 and 37 provide an analysis of the number of classrooms utilized in each school. Some classrooms in each school are not suitable for general scheduling use due to the configuration, size, or restrictions on the room (these rooms are classified as Specialized Classrooms in Tables 36 and 37). The total possible blocks that each room is available is calculated by multiplying the number of rooms by 7 blocks, based on the current schedule. These tables also provide an analysis of classroom used for WIN blocks and of common spaces at each high school.

Note: Students who receive special education services beyond grade 12 are included with grade 12 in this table.
Tables 1C and 1D display the percentage of students who are eligible for free or reduced price lunch based on internal Newton Public Schools data and the percentage of students who are identified as low income by the Department of Elementary and Secondary Education (DESE) for 2021-22 and 2022-23. The DESE low income indicator includes students who participate in one or more of the following state-administered programs: SNAP (Supplemental Nutrition Assistance Program), TAFDC (Transitional Aid to Families with Dependent Children), DCF (Department of Children and Families' foster care program), and Medicaid (MassHealth), or have been identified as low income through the supplemental low income data collection process. For 2022-23, the DESE low income indicator by school and grade is estimated based on the most recent free and reduced price lunch data, as the actual percentages for the current school year are not yet available from the state.

## Preschool Enrollment (Table 2)

Table 2 displays preschool enrollment in Newton for 2021-22 and 2022-23. Preschool enrollment as of October 1, 2022 is 186 students, an increase of 5 students from the prior year, which is typical enrollment for October. The majority of current preschool students (63\%) are receiving special education services. Table 2A displays the nature of disability for current preschool students.

TABLE 2

## Enrollment Analysis Report

English Language Learners (Tables 4 and 5)
Table 4 indicates an increase of 116 students, or $17 \%$, in the number of PK-12 students identified as English Language Learners from last year. There are a total of 782 students in the program this year compared to 666 students last year. The English Language Learners population has grown by 466 students, or 147\%, since 1990.

TABLE 4
ENGLISH LEARNERS: 1990-PRESENT

| Year (as of October 1) | Program Enrollment | Difference | \% Change |
| :---: | :---: | :---: | :---: |
| 1990 | 316 |  |  |

*Starting in 2017, per state requirements, preschool students w ere screened through the English Language Learners office. Starting in 2018, PK students are included in program enrollment.

Table 5 on the following page shows the number of English Language Learner students by grade level and first language in the current year and the two prior years. The elementary ELL population has increased by 64 students from last year and the ELL population at the secondary level (grades $6-12$ ) has increased by 52 students from last year. Table 5 also shows the number of students in each of the seven largest language groups for this school year and the two prior school years. The students in these groups receive native language support as needed. "Other" languages, including French, Vietnamese, Pushtu/Pashtu, Turkish, and Arabic, among others, represent $18 \%$ of the total ELL program enrollment in 2022-23.

## Students with Special Education Services (Table 6)

The following table reports five years of enrollment history of students requiring special education services by placement type and grade level. For all grade levels combined, the percentage of students receiving special education services in the Newton Public Schools this year is $17.8 \%$. This is an increase of 38 students from last school year. There has been a slight decrease in out of district placements as of October 2022 ( 108 students vs. 117 students in October 2021 vs. 122 students in October 2020). Program placement type is defined according to the time out of the regular classroom environment required by a special education placement. The majority of students with special education services are fully included in the general education classroom, with less than $21 \%$ of time spent outside of the classroom. Ten year trends in the distribution of students by special education placement and grade level are illustrated in the graph at the end of the section.

TABLE 6
DISTRIBUTION OF STUDENTS RECEIVING SPECIAL EDUCATION SERVICES

| October 2022 |  |  |  |  |  |  |  |  |  |  |

## Elementary School Districts

## Middle School Districts

# Proposed Residential Development Projections 

## Frequently Asked Questions

## 1. Why do we need to know how many students may reside in proposed residential developments in future years?

Enrollment projections for proposed residential developments are useful for decisionmaking and planning, especially in light of proposed residential development growth in Newton. Carefully crafted, presented, and interpreted projections are a key first step in the planning process. The district is then able to plan the budgets, including capital improvements, classroom space requirements, sufficient teacher workforce and staffing, instructional materials, and transportation, among other things. Accurate projections alert the district to changes in school population to allow for needed adjustments.

## 2. How complex are the projection methods?

Similar to our enrollment projection procedures, our proposed residential development projections are somewhat complex, but, like most statistical methods, they can be explained and replicated. Our methodology is explained in more detail later in this section. All projections in this analysis, including the proposed residential development projections, are based on underlying assumptions that use historical school enrollment to capture trends and patterns specific to Newton.

## 3. Which proposed residential developments are included?

Historically, we have only included permitted residential developments in our projections; developments that were not permitted were not included, as it is possible that the permit process may encounter challenges. We have always consulted with the Planning Department at the City of Newton to discuss all permitted and potential residential developments to ensure we are including the most updated information in projections. Beginning in 2019, we also include all residential developments that have received a special permit or a building permit in our projections.

## 4. What methodology is utilized in Newton?

Student generation ratios (or SGRs) are utilized in Newton to project the number of students that will reside in a proposed residential development. An SGR is a ratio that estimates the number of students arising from one unit within a development. SGRs can be utilized to estimate the number of students in different ways; for example, an average development SGR can estimate the number of students from an entire development, or a specific unit-type SGR can estimate the number of students from a particular unit-type (i.e., an SGR for one bedroom units can estimate the number of students that will reside in one bedroom units in a development).

Prior to November 2018, we utilized the SGRs by unit type that occurred historically at the three largest residential developments in Newton at that time (Avalon Newton Highlands, Avalon at Chestnut Hill, and Arborpoint at Woodland Station). In November

2018, we utilized a new interim methodology due to the increase in proposed residential developments in Newton. This interim methodology was evaluated in 2019 and revised to the current methodology, as described below.

Our current methodology utilizes three different methods of estimating SGRs for proposed residential developments, and then averages the student estimates from these three methods for our final student estimate. We use three different methods of estimating SGRs because each method has benefits and potential issues; the inclusion of the three methods helps mitigate the potential issues associated with each method. It is important to note that these are estimates, in the same way that our enrollment projections are estimates. Many factors go into a family's decision to reside in a development in Newton; however, the estimates that we are providing in this analysis incorporate Newton's history of enrollment from residential developments. The three different methods are described below.

Method 1: This method is similar to the method utilized prior to November 2018. Method 1 uses the average SGR by unit type observed at the three large developments to date in Newton (Avalon Newton Highlands, Avalon at Chestnut Hill, and Arborpoint at Woodland Station). These average SGRs by unit type are multiplied by the number of units for that unit type in the proposed development to estimate the number of students who will reside in those units. For example, the average SGR for market rate 2 bedrooms at the three large developments ( 0.214 ) is multiplied by the number of market rate 2 bedrooms in the proposed development; this yields the estimate for the number of students who will reside in market rate 2 bedrooms in that development. The benefit of this method is that it provides differentiated SGRs by market rate and affordable units. A potential issue with this method is that it only utilizes the history of three large developments in Newton. The average SGR by unit type used in method 1 is displayed below (the average of the 3 largest is utilized for method 1 ; the SGRs for each individual development included in this average are included for reference).

| SGR by Bedroom | Differentiated by Market and Affordable Rate Units |  |  |  |  |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

Method 2: This method utilizes data from all occupied apartment buildings in Newton with fifteen or more units that are classified as apartments or mixed use by the Newton Assessor's Office (buildings classified as tax exempt or congregate housing are not included). Apartments or mixed use buildings that have had very few students residing in them in the past five years are also not included (we exclude existing buildings with an actual average five-year SGR of less than 0.1 in our calculations for method 2, although they are displayed in Tables 15 and 16 for reference). The average number of students residing in the buildings that meet these criteria over the past five years is utilized to estimate an overall development SGR for proposed developments. To do this, the actual SGR for each occupied building (using five-year averages of both public school students and private school students who reside in the building and the number of units in the building) and the average number of bedrooms for each occupied
building is calculated. We average these actual SGRs and the average number of bedrooms for all occupied buildings. Then, we calculate the average SGR per 1 bedroom for all occupied buildings (this is the average SGR for all occupied buildings divided by the average number of bedrooms for all occupied buildings); we call this result the multiplier. For new residential developments, we then multiply the average number of bedrooms for the new development by the multiplier. This yields an estimated overall SGR for the new residential development based on prior experience in Newton's apartment buildings. This estimated SGR is then multiplied by number of each unit type to estimate the number of students who will reside in those units. The benefit of this method is that it incorporates the history of all existing buildings in Newton that meet our criteria. It can also be used when the distribution of bedroom types for a development is not yet known. A potential issue with this method is that it does not differentiate by unit type (bedroom count or market rate versus affordable). The average number of bedrooms, average SGR, and the multiplier utilized for method 2 in the 2022 calculations are displayed below.

| All Occupied buildings |  |
| :--- | ---: |
|  |  |
| Average \# of bedrooms | 1.6762 |
| Average unit SGR | 0.2805 |
| Multiplier | 0.1673 |

Method 3: This method utilizes the estimated overall SGR for a proposed development from method 2 and weights it by unit type (based on bedroom count). The weights that are used come from an external consultant's analysis of the American Community Survey PUMS data (Public Use Microdata Sample) in Newton. The PUMS data provides information about individuals and housing types in Newton; the weights indicate the patterns of students residing in different unit types in Newton. These weights indicate that a larger portion of students reside in 2 bedroom units as compared to studios, 1 bedroom, or 3 or more bedrooms. The weighted estimated SGR by unit type (based on bedroom count) is then multiplied by the number of each unit type in the development to estimate the number of students who will reside in those units. The benefit of this method is that it incorporates the history of all existing buildings in Newton that meet our criteria and it differentiates by the unit type (based on bedroom count). A potential issue with this method is that it does not differentiate between market rate and affordable units. The weights that are utilized in method 3 are displayed below.

| Weighting by Unit Type (based on PUMS data) |  |  |  |  |  |  |  |  |
| :--- | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: |
| Building size | Studio |  | 1BR-M | 2BR-M |  | 3BR-M | Stu-A | 1BR-A |
| 2BR-A | 3BR-A |  |  |  |  |  |  |  |
| 5-9 Units | $25 \%$ | $16 \%$ | $180 \%$ | $138 \%$ | $25 \%$ | $16 \%$ | $180 \%$ | $138 \%$ |
| 10-19 Units | $23 \%$ | $16 \%$ | $192 \%$ | $116 \%$ | $23 \%$ | $16 \%$ | $192 \%$ | $116 \%$ |
| 20+ Units | $29 \%$ | $17 \%$ | $203 \%$ | $90 \%$ | $29 \%$ | $17 \%$ | $203 \%$ | $90 \%$ |

## Final Calculations:

Once the three estimates are calculated from methods 1,2 , and 3 , they are averaged to come up with the estimated total number of students from the development. Then, we deduct $12 \%$ for private school. Historically, students living in occupied developments in Newton have attended private school. We utilize a deduction of $12 \%$ to be conservative;
the percentage of students living in occupied developments and attending private school as of October 2022 is $15 \%$. This yields the overall estimate for the development.

Then, that estimate is divided between elementary, middle, and high school, as students living in occupied developments span all grade levels. For most developments, we allocate $50 \%$ of the estimated students to elementary schools, $25 \%$ of the estimated students to middle schools, and $25 \%$ of the estimated student to high schools. However, for developments that are half a mile or less to an elementary school, we use the following breakdown: 65\% to elementary schools, $15 \%$ to middle schools, and $20 \%$ to high schools. This is due to our experience with developments that are half a mile or less to elementary schools, where we have seen a higher percentage of the students from those developments at the elementary level.

The estimated students at each grade level (elementary, middle, and high) are then added into the projections for the districted school(s) over five years. This is done based on experience; students at new developments do not all move in immediately. Similarly, some developments phase in occupancy (i.e., once one building is completed, those units are available for rent while work on other buildings continues).

The tables that follow detail the calculations for the methodology described above and also indicate the phase in and phase dates for new developments.

## 5. How accurate are projections?

Table 16 displays the number of public school students residing in each occupied building that meets the criteria described in question 4 (method 2), as well as the developments that are being phased in (2022 or earlier). The numbers of students in each development are averaged over the past five years (or the most recent years available for newer developments) and this average enrollment is compared to the estimate of students using our methodology. We utilized our methodology to estimate the number of students from occupied developments, as well as new developments, to obtain a measure of accuracy for our methodology. For all occupied developments (not including those being phased in), we are enrolled at $89 \%$ of our development projections ( 405 students out of 454 projected). On average, our methodology is conservative and projects a larger number of public school students than actually reside in occupied developments (last year, we were enrolled at $86 \%$ of our development projections). There is variation across developments as displayed in Table 16.

## 6. How often are the projections revised?

As mentioned previously, these projections are estimates and should be interpreted as such. Our methodology utilizes our past history with residential developments in the same way that our overall enrollment projection methodology utilizes our past history. Because we utilize our past history to make these estimates, we revise our projections for residential development enrollment yearly as new enrollment information becomes available. This allows us to capture shifts in trends of families residing in these developments; if we did not revise our projections, any changes in the way in which
families are choosing to reside in residential developments would not be captured in our estimates. This allows us to utilize the most current information for planning purposes in the same way that we use the most current information for planning purposes in overall enrollment projections.
